

INTEGRA IT-OT
TECHNOLOGIES

TURNING INDUSTRIAL DATA INTO INTELLIGENT DECISIONS.

INTEGRATE. OPTIMIZE. TRANSFORM.

Connecting industrial operations with secure,
intelligent enterprise data.

INDUSTRIAL AUTOMATION • AVEVA PI SYSTEM • SCADA
IT-OT INTEGRATION • ANALYTICS • OT CYBERSECURITY

ENGINEERING THE CONNECTION BETWEEN OPERATIONS AND INTELLIGENCE

INTEGRA IT-OT TECHNOLOGIES is a specialized engineering and technology integration company that connects plant-floor systems with enterprise intelligence. We bring together industrial automation, AVEVA PI System, SCADA, operational analytics, IT-OT integration and OT cybersecurity, so the data a plant already produces becomes clear, contextual and trusted. The result is better operational visibility, faster troubleshooting, secure connectivity between control and business networks, and decisions made on facts rather than assumptions. From plant-floor sensors to management dashboards, every layer of the operation speaks the same language. Our conviction is simple: technology only creates value when it respects how a plant really runs.

WHAT WE SOLVE

Data trapped on the plant floor

Operational data sits in controllers and historians, out of reach of the teams who need it.

Limited operational visibility

Without context, performance is hard to see and slow to troubleshoot.

Unsafe IT-OT boundaries

Linking plant and business networks demands secure, segmented architecture.

THE JOURNEY OF INDUSTRIAL DATA

→ Better decisions, from the control room to the boardroom.

WHERE ENGINEERING MEETS INTELLIGENCE

Five disciplines, one connected plant.

01	INDUSTRIAL AUTOMATION	SCADA and HMI development, PLC data, alarm management and production reporting.
02	AVEVA PI SYSTEM	PI Data Archive, Asset Framework, PI Vision, and resilient buffered historian infrastructure.
03	OPERATIONAL ANALYTICS	Power BI, OEE, plant metrics, downtime analysis and operational reporting.
04	IT-OT INTEGRATION	Enterprise connectivity, Python and API bridges, OPC connectivity and industrial data flows.
05	OT CYBERSECURITY	Industrial risk assessment, network segmentation, firewall and DMZ architecture, secure remote access.

03 — INDUSTRIES

INDUSTRIAL ENVIRONMENTS WE UNDERSTAND

PHARMACEUTICAL

Data integrity and batch visibility

OIL & GAS

Asset monitoring and multi-site data

PETROCHEMICALS

Process monitoring and yield tracking

POWER & UTILITIES

Turbine, boiler and efficiency visibility

Domain-specific engineering shaped around the realities of each plant floor.

ENGINEERED FOR PLANT REALITY.

01	DEEP OT DOMAIN EXPERTISE	We understand process loops, instrumentation and the constraints of a live plant.
02	SECURITY BY DESIGN	Clear, secure boundaries between control systems and the business network.
03	CUSTOM INTEGRATION	Purpose-built Python, API and OPC connectors that put plant data to work.
04	REAL-TIME VISIBILITY	Live operational insight, from the plant floor to the boardroom.
05	LONG-TERM SUPPORT	Responsive engineering support and system health monitoring, built for reliability.

LET'S CONNECT.

Tell us about your industrial environment, operational challenges, and goals.
